

PROJECT PROPOSAL

VDIGITAL – Vitus Ahanda

A modern, self-manageable portfolio website

Prepared for: Vitus Ahanda

July 2026

This document summarises what we propose to build, what you'll be able to do with it, and what it will cost to run. A more detailed technical specification exists on our side and is available on request.

1. Why This Project

Your portfolio is currently a single hand-coded page. Every update — a new project, a new testimonial, a text change — needs a developer. As VDIGITAL grows, that becomes a bottleneck.

We propose replacing it with a fast, modern one-page website that looks and feels the same as today, plus a private dashboard where you manage everything yourself: text, images, videos, projects, offers — no code, no waiting on a developer.

What you get

- **A polished public site** — same visual identity, smoother navigation, richer media (photos & short videos), fast on mobile.
- **A private admin dashboard** — add, edit, reorder or hide any content yourself, in minutes.
- **Better visibility on Google** — built to be found, not just to look good.
- A low, predictable running cost — detailed in Section 5.
- **Your own domain, hosting and professional email** — fully delivered and ready to use, not just source code.

2. Where We're Starting From

The current site already has the right content and tone: Hero, About, Services, Case Studies, Clients, Expertise, Offers, and Contact. It's well-designed but static — no photos in case studies, no client logos as real images, no video anywhere, and any change requires editing raw code by hand. This is the foundation we'll build on, not replace.

3. What We Will Build

The website experience

- One smooth-scrolling page with a navigation bar that highlights the section you're viewing as you scroll.
- Gentle animations as sections appear, and small interactive touches (hover effects, animated tabs) — nothing flashy, just polished.
- Fully responsive on phone, tablet and desktop.

Content you'll be able to manage

Section	What you can add/edit
Hero	Name, title, tagline + a background photo or short looping video
About	Your bio, positioning, and portrait photo(s)

Services	Add/edit/remove service items, each with an icon
Projects / Case Studies	Title, description, results, plus a photo gallery and video walkthrough per project
Clients	Client logos, added or removed as your client list changes
Expertise	Your skill areas and how they're described
Offers	Your packaged service tiers, each with its own details
Testimonials (new)	Client quotes with photo and role
Contact	Messages land directly in your dashboard, plus your email

Every section above can also be hidden or reordered from the dashboard – nothing requires a developer once the site is live.

The admin dashboard

- Private login, just for you.
- Add, edit, delete and reorder any content listed above.
- Upload photos and videos directly – they're automatically optimised for fast loading.
- See and manage contact-form messages in one place.
- Show or hide entire sections instantly, without deleting the content.

4. Our Quality Commitments

- **Fast** – pages load in under 2 seconds on an average mobile connection.
- **Findable** – built to rank well on Google, with proper page titles, descriptions and sitemaps.
- **Secure** – encrypted connection (HTTPS), protected admin login, and daily backups.
- **Accessible** – usable with a keyboard, readable colour contrast, and comfortable for all visitors.
- **Reliable** – 99.9% uptime target, monitored continuously.

5. What It Will Cost to Run

Beyond the one-time build (quoted separately), the site needs three ongoing things: a domain name, hosting, and a professional email address. Here is our recommended, most cost-effective setup – prices shown in US Dollars and CFA Francs (approximate, at ~600 XAF/\$1).

Item	Per year (USD)	Per year (XAF)
.com domain name	~\$9 – 10	~5,400 – 6,000
Website hosting	\$0 (free tier covers your traffic)	0
Database & media storage	\$0 (free tier covers your traffic)	0
1 professional email (e.g. contact@vdigital.com)	~\$12	~7,200
TOTAL – Year 1	~\$21 – 22	~12,600 – 13,200

For comparison: a Google Workspace mailbox alone runs ~50,400 XAF/year – over 7x more than the email option above, for the same core need.

If traffic grows well beyond a typical portfolio's, there's a clear upgrade path (roughly \$5–25/month depending on the service), but nothing needs to be paid for in advance – you only upgrade if and when it's actually needed.

A local .cm domain (e.g. vdigital.cm) can be added later for about 7,000 XAF – 10,000 XAF/year through the national registrar – optional, and not required to launch.

6. Our Recommendation

- **Start with the .com domain** – cheaper, universal, and enough to launch. Add .cm later if you want it.
- **Choose the low-cost email option** – same professionalism as Google Workspace, a fraction of the price, unless you specifically need Gmail/Drive/Meet.
- **Send us your content early** – photos, project write-ups, and client logos are the one thing that can slow this down; the sooner they're ready, the sooner we launch.
- **Keep all accounts in your name** – domain, hosting and email should be registered under VDIGITAL, with us operating them for you. This protects you long-term.
- **Treat the dashboard as the real win** – the public site is what visitors see, but the dashboard is what saves you time and money for years to come.
